UNIVERSITY

Domain

**Functional
textiles are
enhanced
with special
materials for
a specific
purpose**

**Smart
textiles are
enhanced
with digital
functionality**

**RWTHAACHEN
UNIVERSITY**

Smart textiles applications:

Bio-sensing

E.g., D-Shirt by Smoozi

**RWTHAACHEN
UNIVERSITY**

**Smart textiles
applications:**

Motion capture

E.g., NADI X Smart
Yoga Pants by
Wearable X

**Smart textiles
applications:**

**Communication
and
entertainment**

E.g., Levi's
Commuter x
Jacquard by
Google

**RWTHAACHEN
UNIVERSITY**

Smart Textile Research

- Smart textiles are composed of a textile substrate and a flexible conductor
- Textile **substrates** are flexible, stretchable, breathable, durable, scalable, and ubiquitous
- Most common **conductors** are conductive (piezoresistive) threads, yarns, fabrics, inks and polymers
- Conductors are used to **design** electrical components (e.g., resistors, capacitors, inductors, sensors, actuators, heat grids, antennas, switches, connectors, power sources), transmission lines, and complete electrical circuits
- **Conductors** are **integrated** into textiles using transitional textile techniques (e.g., weaving, knitting, embroidery, printing) as well as modern techniques such as 3d printing
- **In HCI** we focus on
 - User interfaces, interaction techniques, and applications
 - Tools to design and fabricate textile circuits

CHAPTER 4

Conductive Embroidery Research Projects

Intuitex: Wearables and Furniture

Run&Tap: Investigation of On-Body Tapping for Runners

Grabbing at an Angle: Menu Selection for Fabric Interfaces

Grabbing at an Angle Experiments

- **Technique:** pinch angle; **interface:** pie/marketing menu
- Experiment 1: Human performance: *how many angles can people distinguish eyes-free?*
 - IV: 5 angles, 6 fabrics; DV: deviation from angle, TLX, easiness and comfort
 - Result: 45 degree spacing, any of the fabrics, many ways o pinch
- Experiment 2: Sensor performance
 - Using random forest 85% accuracy rate (4 angles) 91% (2 angles)
 - Haptic affordances (can we increase the number of angles with physical textures?)

Whispering Neckless

CHAPTER 4

**Sketch&Stitch:
Interactive
Embroidery for E-
Textiles -
CHI2018**

- *Dynamic*
- *Expressive*
- *Interactive*
- *Functional*

E-Textiles

Fabric

Integrated electronics

Conductive Thread

Creating e-textiles is tedious!

Design tools

Colored Pens

Art Colors

Trace Color

Insulation Color

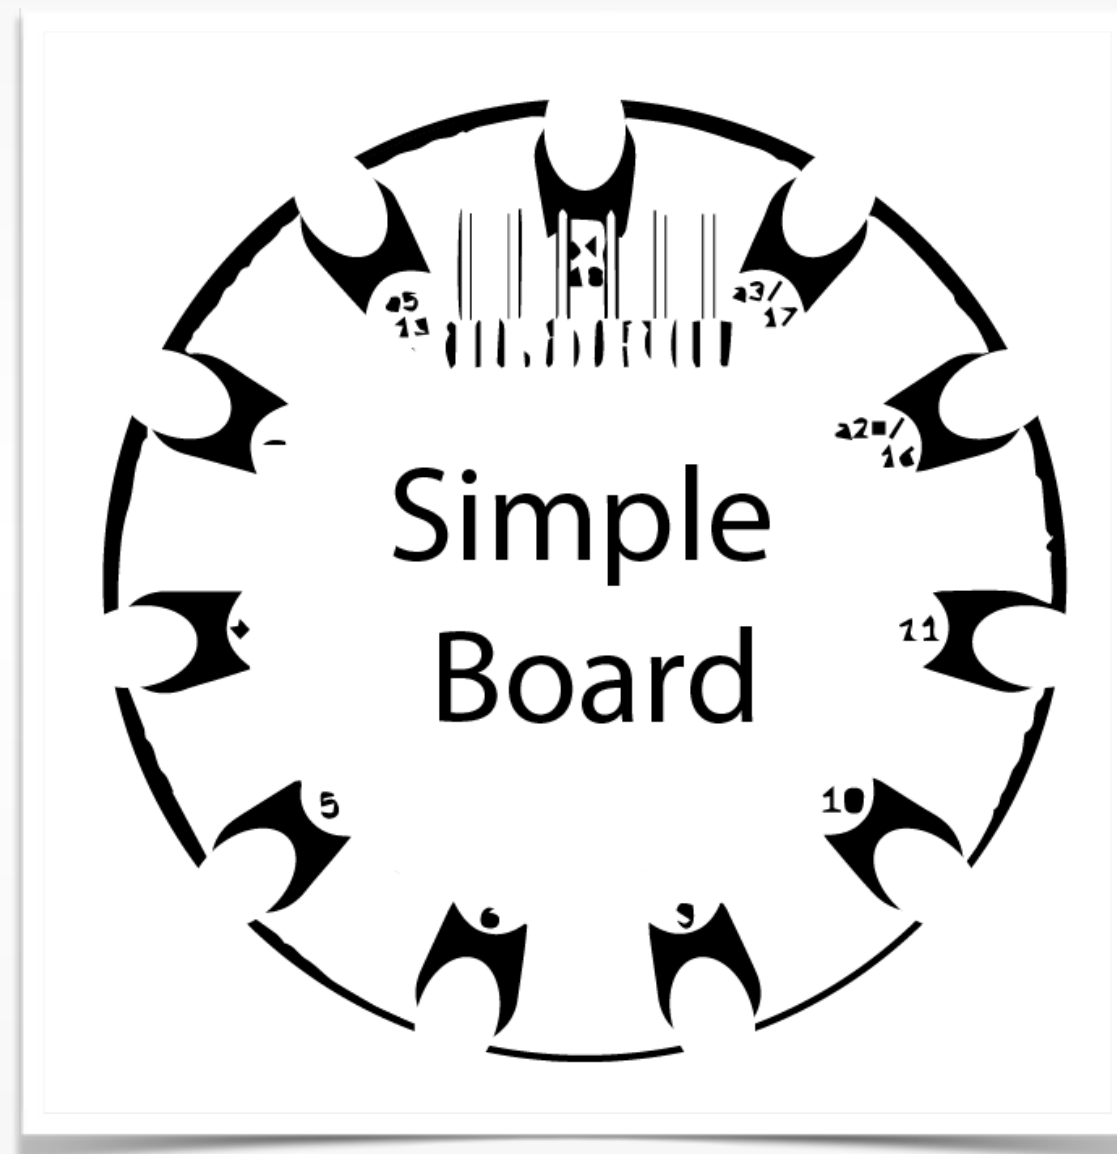

Challenges

1. Presser foot clearance

2. *Automatic tool path*

Component Stickers

Walkthrough

Assign Color Palette

What about more complex designs?

- 1. Optimizing attachment*
- 2. Insulation*
- 3. Crossing traces*
- 4. Interactivity*

1. Optimizing Attachment

LilyStitch

2. *Insulation*

Conductive thread
Non-conductive thread

Insulation Trade-offs

3. *Handling Crossing Traces*

BridgeStitch

4. Interactivity

Capacitive pushbutton

Capacitive slider

Resistive pushbutton

Resistive slider

Sensor Sticker

Example Applications

One-Hour Nap Pillow

Sketching on fabric allowed

- *evaluating designs quickly and in context*
- *understanding the material and getting inspired by it*

Wearable Mandala

New emerging processes

- *Scribble on paper, commit on fabric*
- *Use stickers to frame the design*

Interactive Desk Mat
